when was "12-pin Digilent Pmod" format introduced?

---

As of my knowledge cutoff in September 2021, the 12-pin Digilent Pmod interface standard was already in use. However, I do not have the specific date of its introduction. Pmod (Peripheral Module) is an interface standard developed by Digilent for connecting peripheral modules to host controller boards, typically used for FPGA and microcontroller development. The standard was designed to be small and inexpensive, with the 12-pin variant supporting more complex modules that require more data or power. You may want to check Digilent's official resources for the most accurate and updated information.

what you can tel about machdyne kolibri?

---

I'm sorry, but as of my last training cut-off in September 2021, I don't have any information about a product or service named "Machdyne Kolibri". It's possible that this is a new product or service that has been introduced after my training data. For the most accurate and current information, I recommend checking the latest updates from Machdyne's official resources or reliable technology news outlets.
