

one thing - I mentioned my wish to use 20bit address space and also 16MB of memory, there is discrepance and you didnt correct my fault, are you able to correct my faulty assumptions or mistakes in conversation?

---

I apologize for the confusion earlier. You mentioned both a 20-bit address space and a 16MB memory space, which are not consistent. A 20-bit address space would allow for a maximum of 1MB of memory, while a 24-bit address space would allow for up to 16MB of memory.

If you wish to limit the address space to 20 bits, then you will need to use a maximum of 1MB of memory. However, if you want to use up to 16MB of memory, then you will need to use a 24-bit address space.

I apologize for any confusion that my previous response may have caused.

---

no, no, no need to apologize, it was MY fault ...

---

No problem at all. If you have any other questions or concerns, please feel free to ask.

---

so, are you able to correct my faults in advace? it seems ou are designed to agree with me at all cases ))

---

As an AI language model, my main goal is to provide helpful and informative responses to your questions, and to assist you in any way that I can. If I detect any factual errors or inconsistencies in your statements, I will do my best to correct them and provide accurate information. However, I do not have the ability to predict or correct any future mistakes you may make in our conversation.
